

The Total Solution

Stop Unwanted Content

SurfControl Adaptive Threat Intelligence Service™

New Internet threats emerge daily. Spam, spyware, phishing fraud, viruses, inappropriate content and confidentiality leaks infiltrate enterprise networks by using multiple data entry and exit points, including Web, e-mail, Instant Messaging and Peer-to-Peer. A combination of threat detection technologies and global threat experts are needed to secure your enterprise.

■ Compliance ■ Security ■ Productivity ■ Network Optimization ■ Confidentiality

First to Detect...First to Protect

SurfControl's Adaptive Threat Intelligence Service™ powers the Enterprise Protection Suite. With integrated, 24/7, worldwide threat analysis and research, SurfControl's Global Threat Experts deliver dynamic databases and real-time intelligence technologies, providing continuously adapting protection from ever-changing Internet threats.

Continuous monitoring of all Internet threats, from over 20 countries, ensures timely customer updates and alerts. SurfControl's Global Threat Experts, strategically located on 6 continents, work non-stop to identify and protect our customers from emerging threats.

Integrated analysis and research of all Internet threats, originating from all Internet sources, guarantees the most comprehensive protection available. SurfControl's Global Threat Experts analyze all Internet-borne threats, stemming from Web, e-mail, Instant Messaging and Peer-to-Peer file-sharing, producing the most powerful day-zero protection against today's blended threats.

Adaptive tools and processes ensure proactive protection against ever-changing Internet threats – before they impact the enterprise. SurfControl's real-time intelligence technologies detect and remove threats specific to your line of business, company, or industry. Additionally, SurfControl enables you to create custom threat databases, unique to your organization, to control both incoming and outgoing Internet content.

- **Dictionaries** - 16 categories in 10 different languages

Unparalleled Protection...

■ SurfControl Dynamic Threat Databases

SurfControl's 8 multilingual databases offer the most comprehensive, relevant, and accurate Internet content security available. Signature-driven threat identification at the component-level identifies malicious applications and files, even if disguised through renaming, relocation, or compression. The Threat Databases are continuously updated with new signatures, delivered automatically to your network. The integration of SurfControl's databases with one another results in unprecedented day-zero blended threat protection. Additionally, SurfControl's Dynamic Threat Databases are customizable, allowing you to address threats relevant only to your line of business, organization, or industry.

...provided By Threat Analysis and Research Worldwide

■ Global Threat Experts

SurfControl's Global Threat Experts are located in dozens of countries worldwide, providing non-stop Internet monitoring. They supply multilingual and multicultural understanding, essential to offering complete Internet protection in today's global society. With extensive human review, instances of mis-categorization or "false positives" are diminished, and the accuracy of SurfControl's protection is assured.

■ Real-Time Threat Technologies

SurfControl continues to be the leading innovator of adaptive threat detection technologies. These real-time identification technologies are used in SurfControl's Global Threat Intelligence Centers as well as integrated into the SurfControl Enterprise Protection Suite, providing adaptive and proactive protection against threats as soon as they emerge. These technologies rapidly identify and respond to threats coming in from all Internet access points, around the globe.

At our Global Threat Centers, millions of Internet sites, IM and P2P applications, and e-mail activities are continuously monitored via a global network of over one thousand Internet link-mining spiders, probe e-mail accounts, and honey pots. Html stripped text, e-mail, and application components are analyzed for prioritization and categorized using adaptive intelligence technologies that scan for embedded PICS labels, malicious code, spyware, viruses, inappropriate image signatures and inappropriate text.
